PROFESSIONAL SUMMARY

5+ years in IT operations across fintech, e-commerce, and corporate environments. At Blibli, handled 30+ tickets a day and kept a 95%+ resolution rate for 500+ users. At Bina Sarana Sukses, ran asset monitoring and SAP procurement workflows for 4,000+ devices. The parts of the job I gravitate toward: the troubleshooting, the reporting, and making sure the data matches reality.

CORE SKILLS

IT Operations & Service Delivery	Active Directory Administration	Hardware & Software Troubleshooting
Enterprise IT Support (L1/L2)	Ticketing System Management (OTRS)	IT Process Improvement
IT Infrastructure Support	SAP Procurement (PR/PO/GR)	SQL Reporting & Data Analysis

PROFESSIONAL EXPERIENCE

IT Operations Staff

Jun 2025 – Feb 2026

PT Bina Sarana Sukses

- Tracked status of 4,000+ IT assets (used, available, under repair) daily and flagged wherever the Asset Management System (AMS) data didn't match what was physically there — kept discrepancies from piling up.
- Did regular physical inspections on laptops, PCs, and mini-PCs; if the condition didn't match the record, it got corrected on the spot.
- Handled procurement requests end-to-end: reviewed user requests for completeness, walked them through management and directorate approval, then pushed PR to logistics and PO to procurement — all tracked in AMS and SAP (PR/PO/GR).
- Inspected incoming devices against the PO — checked physical condition and confirmed specs matched what was ordered — before registering them in AMS and assigning asset numbers.
- Took helpdesk tickets on top of asset duties; troubleshoot hardware, software, and network issues for users across the office day-to-day.

IT Technical Support Helpdesk

Aug 2022 – Dec 2024

PT Global Digital Niaga (Blibli)

- Handled 30+ tickets a day via OTRS and closed most of them within SLA — kept that up consistently across a user base of 500+.
- Sat at 95%+ resolution rate throughout — meaning most issues got fixed without needing to escalate or loop back.
- Did L1/L2 troubleshooting across enterprise apps, hardware, and network: the full range from login issues to connectivity faults.

- Documented recurring problems and fixes in the ticketing system so the team wasn't solving the same issues from scratch each time.
- Looped in the infrastructure team when tickets went beyond helpdesk scope, kept handovers clean so nothing fell through the cracks.

IT Support & Development Staff

Nov 2020 – Jul 2022

PT Sunindo Kookmin Best Finance

- Managed Active Directory for 200+ employees — creating accounts, setting access, and handling changes when people joined, moved roles, or left.
- Kept the day-to-day IT running: shared drives, printers, LAN, the stuff that breaks at the worst times.
- Wrote SQL queries for weekly operational reports that went straight to management for decision-making.
- Set up hardware, software, and network devices for users — new joiners and existing staff alike.

EDUCATION

Bachelor of Electrical Engineering (S1 Teknik Elektro)

Universitas Negeri Jakarta | GPA: 3.41 / 4.00

TOOLS & TECHNOLOGIES

Active Directory	SAP (PR/PO/GR)	OTRS Ticketing	SQL
Windows Admin	MS Office Suite	LAN / Network Setup	Hardware Config
